Pivot tables

It is a powerful tool used to summarize, organize analyze & compare large amounts of data quickly without changing the original datasets

It helps us calculate totals, averages, maximum values, and minimum values and counts based on categories such as department, region employee or city

Example: If a company has employee salary details a plot table can help us find

- A total salary of each department
- The max salary in each department
- The avg salary of each department
- The no. of employees in each city

Steps to create pivot table

- Select the data manually
- Insert a pivot table by going to Insert tab
- check the data range
- click OK
- The pivot table fields displays the 4 main area filters, columns, rows, values
- Drag and drop the fields
